

TYSON JENKINS

Bringing detail-oriented focus to infrastructure, I build Kubernetes platform tooling and CI/CD pipelines that reliably deliver code to production.

tyson.j.jenkins@gmail.com | (385) 262-6565 | in/tyson-jenkins | tysonjenkins.dev

SKILLS

Programming Languages: Go, Python, TypeScript

Web: React, Next.js

Software: Kubernetes, Docker, Traefik, Cloudflare, SSH, Nginx, GitHub Actions, Git, Proxmox, PostgreSQL, Redis

WORK EXPERIENCE

PocketRN

June 2026 – September 2026

Software Engineer

Remote

- Building a distributed Playwright E2E testing system using Fly.io Machines to run up to 296 tests concurrently in isolated environments, cutting the full suite from about 60 minutes to about 5 minutes
- Developing infrastructure to dynamically provision one Fly.io Machine per Playwright test, scaling to 300 machines at peak for parallel execution and improved CI/CD scalability
- Integrating distributed E2E testing into CI/CD workflows to accelerate feedback cycles while maintaining reliable and isolated test environments

Adobe

March 2026 – June 2026

Software Engineer

Lehi, UT

- Developed 5 Playwright end-to-end tests to validate critical application workflows and improve test coverage
- Diagnosed and resolved an automated test pipeline failure in 3 hours, tracing it to data integrity mismatches across dev, prod and other environments, restoring CI reliability
- Built and integrated UI features using TypeScript and modern web technologies, contributing across both product development and automated testing

Pure Storage

January 2026 – March 2026

Data Analyst Intern

Lehi, UT

- Analyzing 1,000+ support tickets over 5 weeks using Google Sheets to identify workflow bottlenecks; developed data-backed process improvements projected to reduce response time by 6–8%
- Evaluating internal ticket patterns to identify alerting inefficiencies and developed recommendations to improve signal accuracy and increase time on tickets that need support

Simulo

October 2025 – December 2025

Software Engineer

Salt Lake City, UT

- Built and hosted a Debian package repository on a VPS, creating a centralized deployment pipeline that reduced manual setup time by 60%
- Designed GitHub Actions workflows to automate code testing and integration, cutting regression errors by 30% during development cycles
- Improved deployment reliability and build consistency through end-to-end CI/CD automation

Student Coach

January 2025 – August 2025

Neumont University

Salt Lake City, UT

- Coached students in networking concepts, including static routing, dynamic routing, DNS, and DHCP using Cisco Packet Tracer
- Assisted 20+ students, leading to improvement in lab completion rates

FEATURED PROJECT

TYSONCLOUD: Deployment Platform

May 2025 – Present

Personal / Open Source

Salt Lake City, UT

- Built a Go-based control plane that provisions Kubernetes resources on user action: creating a project spins up a namespace; creating a service provisions the matching Deployment, Service, and Volume.
- Migrated the platform from Docker-only deployments to Kubernetes, moving from static container management to dynamic, API-driven orchestration that mirrors the scheduling and multi-tenancy problems of a PaaS.
- Integrated GitHub for source pull and deployment triggers, automating the path from code push to running service.

EDUCATION

Neumont University

September 2024 – September 2026

Bachelor of Computer Science, Presidents List, GPA: 4.0

Salt Lake City, UT
