TYSON JENKINS

Software engineer focused on platform engineering and DevOps: Kubernetes tooling and CI/CD automation. Cut a Playwright suite of 296 tests from about 60 minutes to about 5 through distributed testing.

tyson.j.jenkins@gmail.com | (385) 262-6565 | in/tyson-jenkins | tysonjenkins.dev

SKILLS

Languages: Go, Python, TypeScript
Frontend: React, Next.js
Infrastructure: Linux (Ubuntu Server, NixOS), Proxmox, Nginx, Traefik, Cloudflare
Containers & Cloud: Kubernetes, Docker, Fly.io
CI/CD & Testing: GitHub Actions, Playwright, Git
Databases: PostgreSQL, Redis
AI Tools: Claude, ChatGPT

WORK EXPERIENCE

PocketRN **June 2026 – September 2026**
Software Engineer Intern *Remote*

- Built a distributed Playwright E2E testing system using Fly.io Machines to run up to **296 tests** concurrently in isolated environments, cutting the full suite from **about 60 minutes to about 5 minutes**
- Developed infrastructure to dynamically provision one Fly.io Machine per Playwright test, scaling to **300 machines** at peak for parallel execution and improved CI/CD scalability
- Integrated distributed Playwright testing into CI/CD workflows to accelerate feedback cycles while keeping test environments reliable and isolated
- Used ChatGPT extensively to accelerate design and development of the testing system and to automate repetitive engineering tasks

Adobe **March 2026 – June 2026**
Software Engineer Intern *Lehi, UT*

- Developed **5 Playwright end-to-end tests** to validate critical application workflows and improve test coverage
- Diagnosed and resolved an automated test pipeline failure in **3 hours**, tracing it to data integrity mismatches across dev, prod and other environments, restoring CI reliability
- Built and integrated UI features in TypeScript and React

Everpure **January 2026 – March 2026**
Data Analyst Intern *Lehi, UT*

- Analyzed **1,000+ support tickets** over 5 weeks in Google Sheets to identify workflow bottlenecks, proposing data-backed process improvements projected to reduce response time by **6–8%**
- Evaluated internal ticket patterns to identify alerting inefficiencies and recommended changes to improve signal accuracy and free up time for tickets that need support

Simulo **October 2025 – December 2025**
Software Engineer *Remote*

- Built and hosted a Debian package repository on a VPS, replacing manual per-machine installs with a single apt install and centralizing software deployment
- Designed GitHub Actions workflows that ran automated tests on every pull request, catching regressions before merge instead of during development cycles

Neumont University **January 2025 – August 2025**
Student Coach *Salt Lake City, UT*

- Coached students in networking concepts, including static routing, dynamic routing, DNS, and DHCP using Cisco Packet Tracer
- Assisted **20+ students**, leading to improvement in lab completion rates

PROJECTS

TYSONCLOUD: Deployment Platform **May 2025 – Present**
Personal / Open Source *Remote*

- Built a Go control plane on self-hosted Linux infrastructure that provisions Kubernetes resources on demand: each project gets a namespace, and each service gets its own Deployment, Service, and Volume
- Migrated the platform from Docker-only deployments to Kubernetes, moving from static container management to API-driven container orchestration that mirrors the scheduling and multi-tenancy problems of a PaaS
- Integrated GitHub for source pull and deployment triggers, automating the path from code push to running service

EDUCATION

Neumont University **September 2023 – September 2026**
Bachelor of Computer Science, President's List, GPA: 4.0 Salt Lake City, UT
